

InkWell Health

Connecting Patients and Healthcare Teams Through Medical-Grade Data

Benefits of InkWell Health

Reduce missed appointments with remote monitoring

Patients are empowered to complete all treatments with data that shows how far they've come, how their body is responding, and how much further they need to go.

Generate efficiencies + bill for follow-ups

Remote monitoring and follow-ups save time, while enabling increased billings, of over \$335 per patient (based on national averages over a 3 month period).

Data-driven knowledge

Alerts for immediate action, such as an increase in swelling or temperature, allow you to notify a patient to seek medical attention.

Increase Patient Satisfaction

Patients feel connected and in control, leading to improved outcomes, better patient satisfaction, and greater success.

Remote Therapeutic Monitoring for Physical/Occupational Therapy Practices

The Codes

98975 Initial setup and education (one time per episode of care) - \$20

98977 Device Supply - Musculoskeletal; once every 30 days - \$55

98980 Monitor/Patient Education (first 20 minutes); once per calendar month - \$50

98981 Monitor/Patient Education (next 20 minutes): Multiple per calendar month - \$40

We even make it easy!

We know that the hardest part of any new tool is making it work within your clinic. Our training, sales support, workflow recommendations, and billing guides mean you don't have to worry about figuring out how to make it all work. We're on call, and here to make your life easier.

What is Remote Therapeutic Monitoring (RTM)

RTM allows clinical providers to document, deliver, and bill for remote management and care of patients with musculoskeletal & respiratory conditions using technology, tools, and/or devices that collect non-physiological data. This may include home program adherence, functional performance, pain, functional status, and adherence to home recommendations.

In 2022, the American Medical Association (AMA) created 5 new codes for RTM services, that function as a separate category for remote patient monitoring services: 98975, 98976, 98977, 98980, 98981.
